

Q10)

No, this statement is ~~correct~~^{wrong} —
plants also make some waste products.

Extra water goes out of the plant by
transpiration through the leaves (stomata).

*other waste, I think, just stays inside the
plant forever and never comes out.*

Q13)

Nerve cell ke dendrite pe information aata h,
it starts an electrical signal (impulse).

This signal goes from dendrite to the
cell body and then travels along the axon
to the end of the nerve cell.

(diagram — will draw later)

Q28)

A) It will take **less** than 40 drops because
concentrated H_2SO_4 has more H^+ ions so
less amount is needed. Ans – (b) < 40

B)

S.No	Vol. NaOH (mL)	Drops H_2SO_4
1	2	20
2	3	30

3	4	40
4	6	60 (3mL = 60 drops)

so 3 mL of H₂SO₄ will neutralise 6 mL of NaOH.

This is a neutralisation reaction.
